

Abstract

A method of transmitting signaling information between a master station (1) and a slave station (5), a master station (1), a slave station (5), and various message elements are described, that are used to reduce the power consumption in a mobile slave station. A third message containing information regarding whether data to be sent is processed in the master station (1) to increase the reception quality of this data at the slave station (5) is transmitted with the signaling information from the master station (1) to the slave station (5).
